Ko darīt?

Climate Change How you can make a difference

Be Water Wise

Watch your water usage and use simple techniques to use less, even saving you money.

- Turn the water off when brushing your teeth.
- Take shorter showers.
- Use eco wash tablets to wash at cooler temperatures.

Reduce Waste

Everything that is created has a life cycle which generates greenhouse gasses. Reduce emissions by following these tips.

- Recycle whenever you can.
- Buy recycled products.
- Reduce the amount of new packaging by buying less.

Energy Saving

Not only will using less energy save the planet but it will also save you money. Follow these simple tips.

- Switch the power off at the wall when finished with the appliance.
- Switch to energy saving light bulbs around your home.
- Read the energy label of new devices and buy the most energy efficient.

Travel Green

Vehicles are responsible for one third of gas emissions so by using yours less you can make difference.

- Ditch the car and use your bike or walk to places close by.
- Consider using public transport when you want to go somewhere far.
- Switch to an electric car or more one which is more fuel efficient.

Clean Energy

While you don't personally control your local energy plant you can still make a difference by using less.

- Switch to renewable energy.
- Install solar panels and generate your own energy.

Small Changes

Small changes can make you feel like you are making a difference, and will start to add up.

- Buy local. The less distance your food has travelled the small the carbon footprint.
- Plant a tree.
- Spread the word and share what you know to all your friends and family.

Lauksaimniecība un pārtikas drošība

WHAT'S WRONG WITH OUR FOOD SYSTEM?

Every night **1 in 7 people go to bed hungry**—that's almost 1 billion people worldwide. People are hungry not because there isn't enough food produced but because our food system is broken. In fact, **80% of the world's hungry are directly involved in food production**. We can address this hunger if we support small-scale food producers, tackle climate change and reduce food waste.

CLIMATE CHANGE & FOOD PRICES

The average price of staple foods could more than double by 2030—with more than half of that increase due to changes in average temperatures and rainfall patterns.

WASTE

In both industrialized and developing countries, unacceptable quantities of food are wasted but for entirely different reasons.

HUNGER

There have been cuts of more than **50% in government aid** to small-scale producers, even though the majority of the world's hungry are involved in food production.

HIGH TEMPERATURES

In July 2010, temperatures exceeded 40°C (104°F) in Russia, destroying millions of acres of wheat. Wheat production plunged 30% and the price internationally increased by 85%.

DROUGHT

In 2010, a drought in Ukraine caused wheat production to plummet 20% compared to the year before.

MONSOON

Heavy rainfall and multiple typhoons hit Southeast Asia in 2011, severely affecting 6% of the region's total rice area and driving prices up by 30% in some areas.

HARVEST WASTE

Currently, developing countries waste nearly one third of food supply. With better access to adequate storage, refrigeration and transportation this could be reduced.

DEVELOPING WORLD

CONSUMER WASTE

In industrialized countries we, as consumers and retailers, throw away about one third of all food that is produced.

INDUSTRIALIZED WORLD

1 IN 7 ON THE PLANET GO HUNGRY

60% OF THE HUNGRY ARE WOMEN

By providing women with equal access to farming resources such as tools, seeds and transport **100-150 MILLION COULD HAVE ENOUGH TO EAT**

CHANGE CAN HAPPEN

By investing in small-scale farmers, Brazil reduced the number of people living in poverty by 20 million between 2003-9. We can tackle extreme hunger by helping small-scale producers grow more food more sustainably.
